

# GAMUT LIVESTREAM

Bite-sized Conversations with Business  
Leaders and Technical Experts.

## Audio/Video Technical Reference for Guest Speakers

*Preparing for Your Livestream Conversation*

Going live can seem intimidating, so we put together these tips to help you prepare for a successful broadcast with us.

### Web Browser Recommendation

We recommend using the Chrome web browser for best results. (Safari will not work.)

### Device Recommendation

Join from a full screen device (laptop or desktop computer). A mobile device may not have all the settings available that you will need.

### Location Recommendation

Aim for a well-lit location with a neutral background. Avoid backlighting such as a bright window behind you, or people may not be able to see your face.

### Video and Audio

You will enable your own webcam prior to starting. We recommend using headphones to reduce background noise/echo. Keep yourself muted when you're not talking to improve audio quality for listeners.
